REML SECTION

MEMORANDUM

SUBJECT: WACM Review Comments on Martha C. Rose Proposed Plan

FROM: *for* Larry B. Ferguson, Chief
Water Compliance Branch

TO: Steven Kinser, Remedial Project Manager
Superfund Branch

We have reviewed the subject document and offer the following comment:

It suggested that stream monitoring in the classified and unclassified portions of East Pin Oak Creek and downstream in the next receiving stream be conducted for the same period of time planned for the groundwater monitoring. Both water and fish tissue samples should be collected periodically to assess the actual risks to cattle, wildlife, and humans from water or fish tissue exposure and to assess the effectiveness of the clean-up actions. Sediment contamination migrating downstream and/or base flow from contaminated groundwater would be assessed by this monitoring.

If you have any questions please contact me. The member of my staff most familiar with this subject, John Houlihan, x7432, can provide additional information.
